promodoro

Our customers' wishes come first.

At promodoro, you are our focus. Every company has specific needs, and we understand them. That's why we work closely with you to deliver the right textiles. Whether it's corporate fashion, promotional wear, or workwear – our durable products are tailored to your specific requirements. Our mission is: "We provide high-quality clothing for everyone."

Thanks to our central location in Düsseldorf, we respond quickly to your needs. Personalized advice and custom offers with real added value are a matter of course for us. Our service starts with the initial consultation and continues even after delivery. Through individual support, we ensure

your long-term satisfaction and that you fully benefit from our textiles. Additionally, we guarantee reliable and on-time delivery.

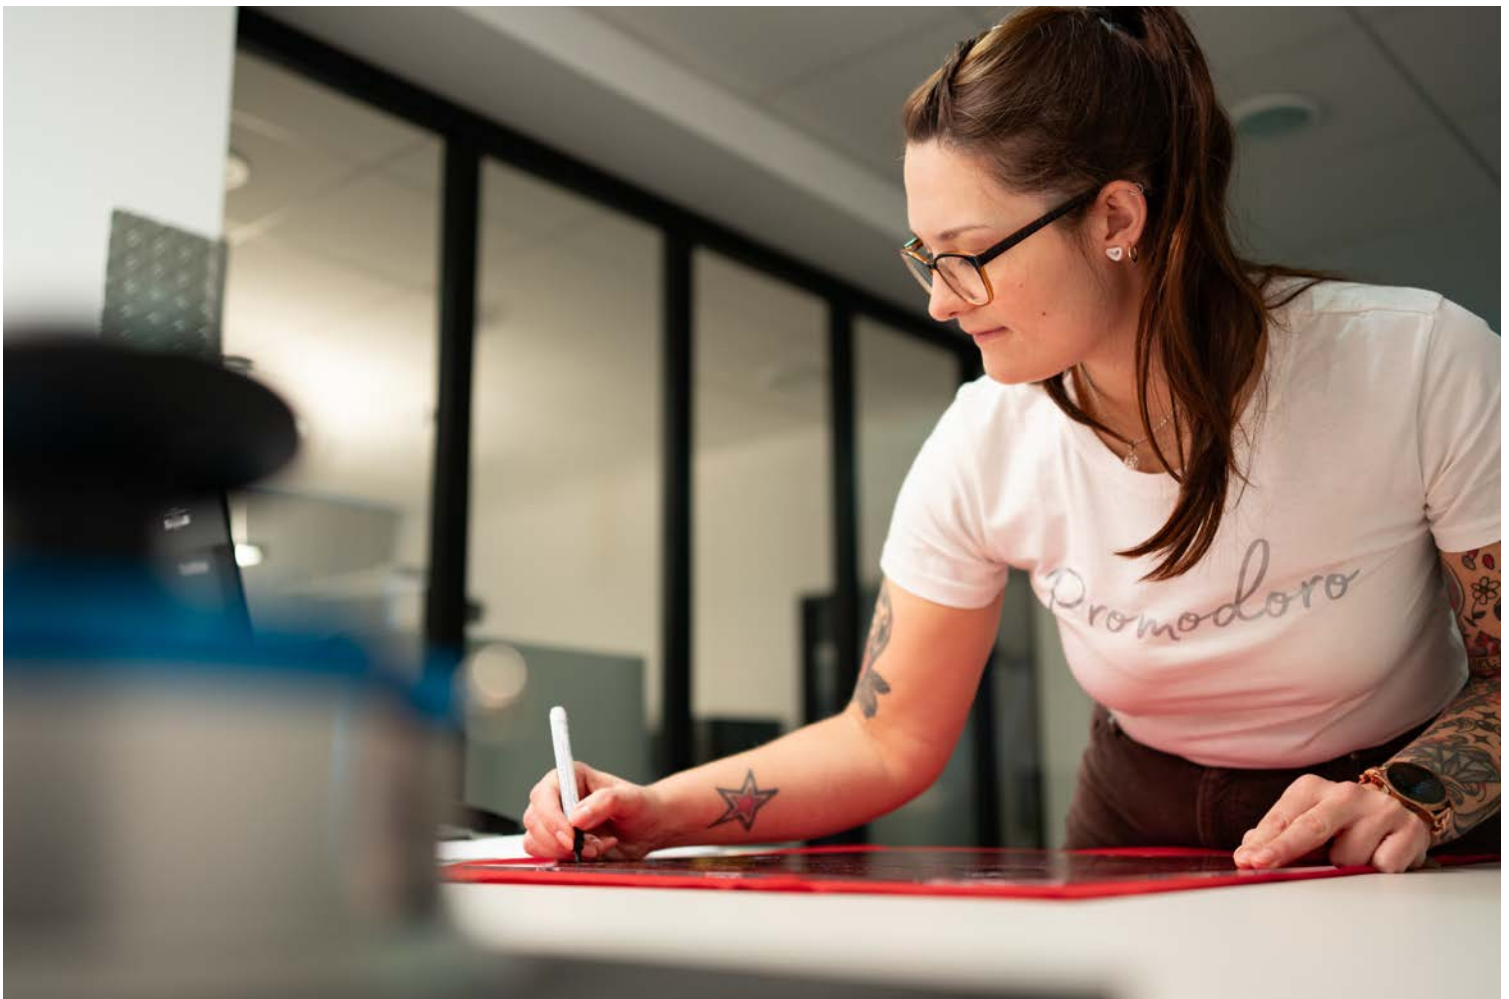

Sustainability through durability – that's our promise. Our textiles stand out for their resilience and long lifespan. Their high quality means they need to be replaced less often, significantly reducing resource consumption in production, transport, and disposal. This helps you act more sustainably.

With promodoro, you have a partner who listens. We understand your needs and provide reliable advice – because our customers' wishes always come first.

The 6 Pillars of Quality Assurance.

At promodoro, quality is our top priority. But what does that mean for you? Our products are crafted not only to look great but also to maintain their quality, shape, color, and functionality over a long period. Each garment is the result of a meticulously planned process that ensures the highest standards are upheld. This process includes six essential steps, from the initial idea to long-term use:

Christina checks the shrinkage values using the shrinkage template standardized according to ISO 6330.

1. Product Design and Development

This step lays the foundation for the final product quality. It sets the course to meet both functional and aesthetic requirements.

Material Selection:

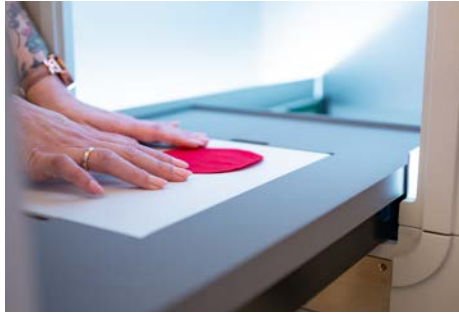

promodoro uses only long-staple, combed cotton known for its high quality and durability. Long-staple fibers create a smoother, softer textile surface and enhance durability as well as the product's ability to be refined.

Functional Requirements:

Depending on the intended use, the material is developed to meet specific needs, which include durability, vibrant colors, excellent washability, and suitability for embellishment. Requirements like breathability, moisture regulation, and UV protection are also defined here.

2. Planning and Production

Once the development has been successfully achieved, and pre-production has been tested, the manufacturing process begins in certified facilities, adhering to the highest international standards in various areas of the production chain that include social standards, environmental protection, sustainable approach, quality & process management (see page 9).

The suppliers receive the colors in digital form for precise and efficient coordination.

Planning Monitoring:

All production processes are closely monitored at each phase, from yarn delivery, knitting, dyeing, finishing, cut & sew, ironing, packing, shipping to ensure on time & smooth delivery at our warehouse.

3. Testing During Production

Throughout production, continuous quality checks are performed on site and in our own laboratory in Düsseldorf, to ensure that our high standards are maintained. Yarn is controlled and tested to make sure that it meets the required parameters before knitting. All knitted fabric is 100 % check before dyeing. After dyeing and finishing, all the fabric is tested on site and also in our own laboratory in Düsseldorf, which include just to name a few, shrinkage, color fastness, pilling, twisting. During the Cut & Sew stage, ironing, and packing, the dedicated quality team performs intensive quality inspections.

4. Final Inspection

Before a product is authorized to be shipped, a final quality inspection is conducted based on internationally recognized standard AQL 2.5. An essential standard in quality control that defines the tolerance in relation to the quality standard set by promodoro.

5. Incoming Goods Inspection

Once production reaches our warehouse, we start a full audit from the beginning. The audit includes the testing of all the parameters of the fabric as previously done but also a new final AQL 2.5 Standard audit. Special attention is also given to any potential damage that might occur during transport.

6. Regular Long-lasting Testing

To ensure the long-lasting quality of the products, promodoro conducts regular tests on already-produced items with Repeated Wash Tests. These tests simulate the long-term use of textiles by washing and drying the items multiple times over an extended period. This ensures that products maintain their quality, shape, color, and material quality even after many washes.

Durability Analysis:

The results of these tests feed back into research & product development to continuously improve textiles and provide customers with long-lasting, comfortable & sustainable clothing.

Conclusion:

Each stage of promodoro's quality assurance process is meticulously planned to ensure products meet the highest standards. From selecting materials to conducting long-term durability tests, every measure is taken to guarantee that the textiles are durable, resilient, and satisfy the needs of our customers.

Here, it is checked whether the dimensions of the presamples are correct.

A good sign of sustainability.

MADE IN GREEN

promodoro promotes sustainability through durability. We use high-quality materials and meticulous processing to create products that last longer. Durable clothing reduces waste and protects the environment in the long run.

Durability reduces resource consumption

Textile production requires substantial amounts of water, energy, and raw materials. promodoro manufactures clothing that maintains its quality for many years, thus reducing the need for frequent textile production. This, in turn, decreases the demand for raw materials such as cotton and lowers water usage. Additionally, the environmental impact from transport and packaging is minimized.

High-quality materials as the foundation

promodoro exclusively uses combed and ring-spun cotton, known for its high durability and smooth surface. These materials not only provide comfort but also ensure a longer lifespan. Especially durable blended fabrics, like those in the EXCD collection, show minimal wear and resist pilling. This means the clothing retains its shape even after many washes.

Sustainable production for durable textiles

We focus on optimal production conditions rather than fast-moving trends. Durable textiles require sustainable production from the start, which is why we exclusively collaborate with producers who meet the highest standards.

Transparency in supply chains

MADE IN GREEN by OEKO-TEX® is a traceable label for sustainably produced textiles. It represents environmentally friendly production, tested materials free of harmful substances, and socially responsible working conditions. With a product ID, maximum transparency is achieved, allowing all items to be traced back to their origins. The label combines the OEKO-TEX® STANDARD 100 for safety against harmful substances with the STeP certification for sustainable production facilities.

Less waste through durable clothing

promodoro's durable textiles reduce textile waste as they retain their shape and can be used for a long time, even after many washes. Less waste means less environmental burden. promodoro thus contributes to leading the textile industry toward a more sustainable future.

Moving forward together

promodoro promotes conscious consumption and encourages customers to choose durable products and take good care of them. promodoro recommends wearing clothing several times before washing to save resources.

High-quality clothing is not only beautiful but also reduces the ecological footprint. Every durable garment brings us closer to the vision of a more sustainable future.

Better safe than sorry, when it's provable.

We collaborate with producers who are certified in various areas of the production chain. The certifications cover aspects such as social standards, sustainability, environmental protection, materials, or production processes. Here, we provide an overview of the key certifications held by our facilities!

of our fleece jackets:
windproof double-layered fleece,
water-repellent, warming
yet breathable, moisture-
regulating, and quick-drying.*

EXCD

WORKWEAR
COLLECTION

EXCD

by promodoro

*Robust and durable.
And also easy to iron.*

With EXCD, we present our workwear collection – designed for people who deliver peak performance every day. The combination of ISO 15797 certification, easy-care properties, and durable materials makes EXCD the perfect choice for professional use.

The collection features high-quality fabrics with a composition of 60 % cotton and 40 % polyester, combining comfort and functionality. Thanks to precise craftsmanship, your clothing remains shape-retaining, colorfast, and exhibits minimal shrinkage – even after numerous washes at up to 60 °C.

EXCD not only meets the highest industrial standards but also provides long-lasting, easy-care, and robust workwear that keeps up with you – every single day.

The EXCD collection relies on the innovative VORTEX® spinning technology. Using compressed air, fibers are drawn to the yarn center in a vortex-like motion and securely bonded. The result is a yarn that is exceptionally durable, long-lasting, and resistant to pilling.

This technology also reduces the hairiness of the yarns, giving the fabrics a particularly smooth and premium appearance. The even surface ensures that embellishments like prints or embroidery deliver optimal results.

These unique properties make the EXCD collection the ideal choice for demanding applications where quality, durability, and versatility are essential.

*New! Tested according
to ISO 15797*
